

ATHLETE MEASURING STATION

WHAT. WHY. HOW.

Measuring an athlete. Easy. Fast. Accurate. Un-arguable.

What

It includes:

ATHLETE HEIGHT & REACH HEIGHT:

- Athlete Measuring System in **Inches or Centimeters**
 - Fixed Base
 - ¼ inch increments
 - Easy to read scale
 - Conversion chart
 - Athlete Height 4'10" to 8 foot
 - Athlete Reach to 8 foot

Why

We designed it:

Zybek Sports has learned a few things from testing over 100,000 athletes in the past 10 years. This is why we build it:

IT'S IMPORTANT:

- Size Matters; it is often not measured correctly

IT'S FAST:

- Easy to read height and reach measurements
- Optional barcode scanning makes it even faster.

IT'S ACCURATE:

- Fixed base; unchangeable ruler on metal fixture.

IT'S EASY:

- Read the number on the ruler. Or
- Barcode scan the number. System allows only the correct ¼" number to be scanned.

IT'S REAL. IT'S UNARGUABLE:

- The #1 'concern' Zybek receives after an event: "You have my height wrong. My doctor says I am "X" tall..." That's the real reason we build it.
- Athlete steps on the base and the system is lowered to contact athlete head.
- The height is read.
- Measuring system stays in place.
- Athlete can verify the measure themselves
- No questions.

How

It's done:

ATHLETE HEIGHT AND REACH:

- Athlete removes shoes. Heels against backstop.
- Measuring device lowered to athlete's head.
- Height number is read or scanned.
- Athlete stands on base and push the reach height bar as high as they can.
- Reach number is read or scanned.

WING SPAN:

- Athlete places fingers on fixed side of measure bar
- Athlete pushes movable end as far out as possible.
- Number is read or scanned.

HAND SPAN:

- Hand is expanded as far as possible. Distance read.
